FOR FARMERS' CONSIDERATION.

Conrad Wilson, in recent articles on the American dairy, presents several points of interest for the consideration of practical farmers with a view to increaslast census report for the whole country, rank first, because wheat is the most at that time nearly 12,500,000 head, yield of milk from these cows to average

Mr. Wilson estimates the total annual sumes that if this entire product were converted into milk under right condibutter and cheese than is generally once arrested. He was defended by Mr. fact is also to be noted that the coarser credited to it. As to questions of breeds, Robert J: Brent of Baltimore, preparations of Graham meal or flour Mr. Wilson does not hesitate to proare apt to produce excessive intestinal mounce the Holsteins as outranking any compares a few of the best yearly rates of productions in substantiation of the for ten cows is given, or an average of 15,731 pounds a year for each. Heading break, two strangers came to his place, grew stronger, and in one minute became the system over that period of illness the imported cow Aaggia, of Syracuse, road speed, the roar of its approach when rest and a certain sense of reple- year for five cows of other breeds is given, or an average of 11,400 pounds

In butter yields an aggregate of 6,070 pounds of butter for ten Jerseys is given, making an average of 607 pounds per cow. In comparison with these figures is an aggregate of 2,367 pounds of butter for five cows of different breeds, so plained to be the best known for the various breeds under consideration.

The percentage of butter found in the milk of different cows varies materially according to the breed, the quality of food, etc., ranging from four quarts of milk to twelve or more for one pound of

by Mr. Wilson of milk yield per day, of the products of two-year-old heifers remilking period, the butter yield per week, etc., to prove the possibilities of the American dairy, as well as to show the real progress made by some farmers. ment in the value of cows, Mr. Wilson believes it no less true that grade ani-

thoroughbreds, and often more so. He says: "Yet this does not at all imply that the latter can be dispensed with, for we cannot have a good quality of grades without a good strain of blood to start from. While it is conceded that pedigree is one of the factors in the value of a good cow it is not by any means the only factor. Maximum results in the dairy are not the sole outcome of any single condition. They depend not merely on the capacity and breed of the cow, but also and equally on the intelligence and good management of the owner; and what is equally true but seldom considered, even the capacity of the

duet of human skill,"

cow is itself to a large extent the pro-
